

AppOps Test

Ensure application uptime

You work hard to build and maintain Salesforce and the apps that power your business, but even small changes can cause unexpected issues. AppOps Test validates that changes to Salesforce CPQ's reference data produce the desired results and analyzes if new Salesforce releases have inadvertently impacted existing workflows and functions. With AppOps Test, you can catch regressions and issues introduced in a new release before they impact production and prevent previously working configurations from being impacted by new changes.

Accelerate testing to release faster.

Automate the repetitive steps and time it takes to create and execute tests. Test the entire application configuration in minutes.

Increase testing capability.

Expand test case scenarios with reusable test templates. Run and rerun groups of test cases at every stage of the agile release process.

Prevent automatic Salesforce releases from breaking CPQ.

Incorporate testing into your release readiness process to ensure the CPQ reference data and customizations your business relies on are working as expected.

Minimize disruption to users.

Catch and fix issues early to continuously deliver high quality apps.

KEY FEATURES

Test case authoring

Create, organize, plan, and execute your test cases and easily re-run them at later intervals.

Test automation

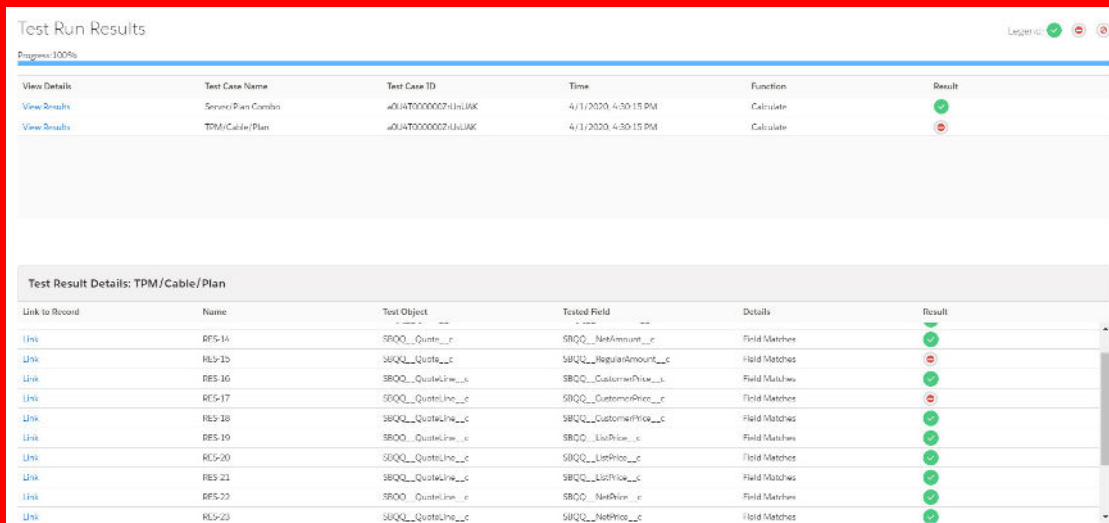

Create test templates that can be easily reapplied across multiple test case scenarios.

Instant pass/fail visibility

Report & analyze test case pass/fail results at the record level to quickly troubleshoot issues.

Test complex CPQ logic

Reliably confirm Salesforce CPQ drives the expected results. Validate price rules, quote lines, line amounts and net totals are the correct values.

The screenshot displays the 'Test Run Results' interface. At the top, it shows a progress bar at 100%. Below this, there is a table with columns: View Details, Test Case Name, Test Case ID, Time, Function, and Result. Two test cases are listed: 'Service/Plan Combo' and 'TPM/Cable/Plan', both with a 'Calculate' function and a 'Pass' result. Below the main table, there is a section for 'Test Result Details: TPM/Cable/Plan' which contains a detailed table of test results.

Link to Record	Name	Test Object	Tested Field	Details	Result
